SBS TANKS' AFRICAN FOOTPRINT, AND BEYOND

CHANGING THE FACE of liquid storage solutions in mining

SBS Tanks – a world-class liquid storage solution designed and manufactured by South African based **SBS Water Systems** – boasts over 17 years' experience complying with the stringent technical, health & safety and environmental demands of the mining industry.

SBS Water Systems pioneered the acceptance of modular zincalume liquid storage solutions in the African market in 1998 and this year celebrates its 17th anniversary as a solutions partner of choice to many major role players in the mining industry throughout the African continent and abroad.

The drive and ability to go beyond being simply a tank supplier and engaging with its customers on all levels of a project, providing expert technical advice from the

opening brief, through the design phase, installation and finally, commissioning of the project is what sets SBS apart from others in the marketplace.

As a result of this level of dedication its customers receive not only a world-class liquid storage solution, but also a positive and productive experience that encompasses the entire sales, manufacturing and delivery process.

SBS Tanks' sales and marketing manager Brian Wilson attributes the company's

phenomenal level of repeat business and satisfied customers to its resolve to put the customer and their needs at the forefront of each and every enquiry and order - no matter how large or small.

The company firmly believes that educating its valued customers has immense benefit to all concerned and offers in-house technical presentations and demonstration builds of SBS Tanks as a part of its service package. "An educated group of associates with full knowledge of both

the capabilities and limitations of the SBS Tanks range means that our solutions are specified for the correct applications and locations and more importantly develops a lasting relationship and trust between our businesses," says Wilson.

Beyond its customer-focused philosophy, another strength that features highly on the list of reasons to partner with the SBS Tanks team is the vast technical knowledge base which the company has developed from many years of practical industry

experience supplying liquid storage solutions to the mining industry and others worldwide.

The industry knowledge within SBS extends from the top down, from the managing and financial directors along with members of the senior management team who have been actively involved in the liquid storage solutions industry for over 20 years.

Further securing SBS's foothold in the industry as the leading source for liquid

storage solutions is an internal technical department offering design and drawing services at any stage of the project life cycle, a knowledgeable sales team who are industry focused, a contracts management department skilled at managing projects in a wide array of applications and an army of fully trained and certified installation teams with the ability to deliver the SBS commitment to product and service excellence to site with full confidence.

While SBS Tanks are uniquely suited to

While SBS Tanks are uniquely suited to the harsh conditions presented by the African environment, the SBS footprint extends far beyond the continent's borders

the harsh conditions presented by the African environment, the SBS footprint extends far beyond the continents borders with an established and growing network of knowledgeable distributors servicing North and South America, the Middle East and Australasia. Wilson states that SBS's success in the global market is a direct result of the company's responsiveness to adapt the SBS Tanks range to suit regional geographic and climatic conditions such as seismic events and cyclonic winds. This is coupled with its distributor's superior ability to understand and exceed the quality and service expectations of blue chip international businesses across a wide range of industries.

Operating within the global marketplace has given SBS the opportunity to reinforce its commitment to quality by pursuing and being awarded the coveted SABS ISO 9001:2008 Quality Management Systems certification. SBS again goes a step beyond others by covering its quality for all aspects including design, development, manufacture, supply and installation of its

Zincalume storage solutions.

The modular design of the product also plays a key role in the success of SBS Tanks, both locally and

internationally. As an example, its flagship model ST31/09 (3 300 kℓ gross capacity) can be manufactured and loaded into a 40' ocean container within eight weeks of order for delivery anywhere in the world and then assembled within 18 days of arrival on site.

Transportation of SBS Tanks to even the most remote locations over the most rugged terrain is possible with forward planning and guidance from the experienced team at SBS.

Designed for long service life in harsh conditions, the SBS Tanks range is manufactured using original bluescope zincalume steel due to its unrivalled history of consistent quality. All roof trusses and accessories are hot dipped galvanised to internationally recognised standards to insure long service life.

The SBS700 potable water liner which serves to retain water as well as provide a barrier between it and the metal tank shell is manufactured from a proprietary multi-layer, woven reinforced PVC material certified to AS/NZS 4020:2005 for materials in contact with drinking water. The company also offers other liner solutions including a heavier flexible non-potable

SBS Water Systems pioneered the acceptance of modular zincalume liquid storage solutions in the African market in 1998

liner and HDPE on-site welded solutions for storage of extremely aggressive liquids.

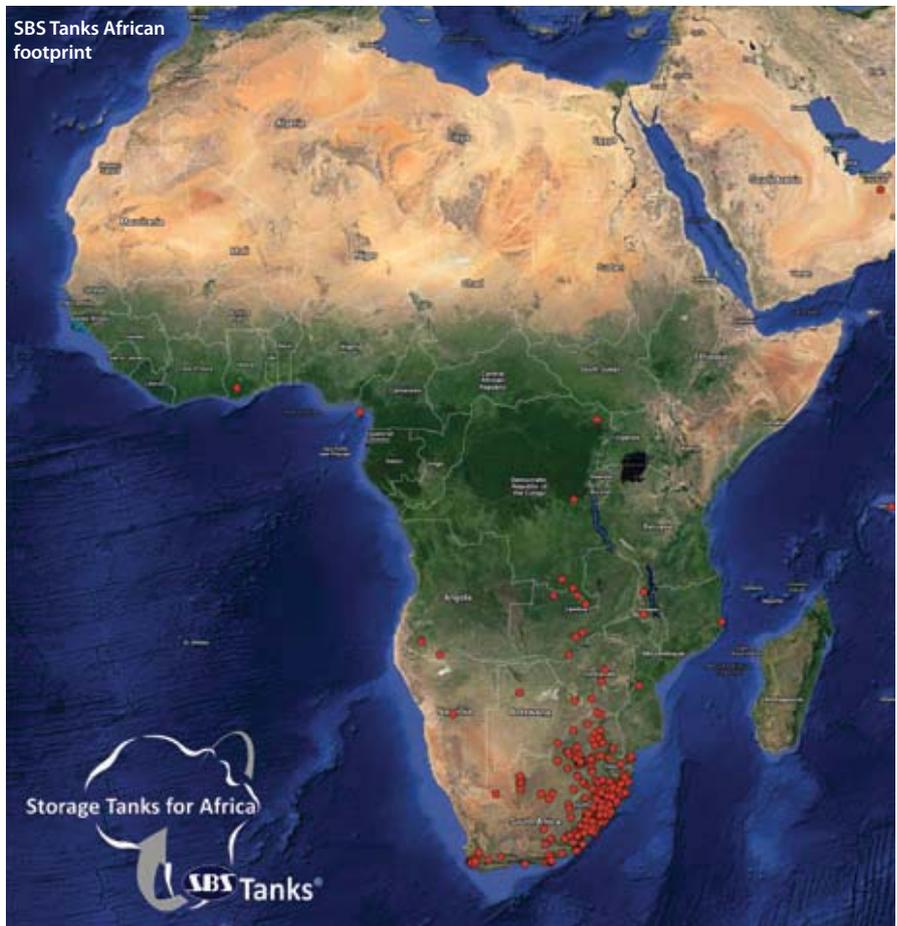

The SBS Tanks range is available in a wide range of capacities, heights and diameters from the smallest 12 kℓ ST04/02 (2.73m diameter x 2.14 m height) to the largest capacity 3 301 kℓ ST31/09 (21,16m Diameter x 9,39m Height). SBS Tanks® can be interconnected to provide larger

capacities and can be supplied with or without roof covers where open top applications are required.

SBS Tanks are offered in the standard zincalume mill finish or epoxy powder coated to the customer's requirements.
